

Regenocyte Therapeutic Announces Successful Treatments
Using Adult Stem Cell Therapy
State-of-the-Art Treatment Center Brings Immediate Hope to Cardiac, Vascular Patients

Naples, FL (Insert Date of release) . . . Regenocyte Therapeutic, a leading provider of Adult Stem Cell therapies, announced that it has successfully treated over three hundred of various diseased patients with their own Adult Stem Cells. For patients who have exhausted the boundaries of traditional medicine, Adult Stem Cell Therapy represents a significant medical breakthrough for improving their quality of life and long-term survival, explained Zannos G. Grekos, M.D., Director of Cardiology and Vascular Disease at Regenocyte Therapeutic, "Adult stem cell therapy is truly revolutionary. Clinical results from numerous Stem Cell procedures that have been performed for # years overseas demonstrate that the Regenocyte Adult Stem Cell procedures are safe and effective and available to patients today."

Cells Created From Patients' Own Blood

Adult Stem Cells are extracted from a patient's own blood via a standard blood draw. The few naturally occurring Stem Cells that circulate in the blood are cultivated into millions of cells called "Regenocytes," and are sent to one of Regenocyte Therapeutics' internationally licensed treatment centers. The Regenocytes are then re-injected back into the patient's circulation, heart, lungs, kidneys, or damaged tissue, where they stimulate regrowth and greater blood flow. Unlike more controversial embryonic stem cell therapy, Adult Stem Cell therapy relies only on cells found in person's own peripheral blood, which are capable of self-multiplying into additional cells and becoming almost any type of new cell or tissue. In addition, because Regenocytes are created from the patient's own blood, they cannot be rejected by the patient's body.

Regenocyte Therapy Now Available Outside Clinical Trials

Although some clinical trials have been available for chronically ill patients while the procedures await FDA approval, eligible patients now have immediate and direct access to the procedure at the new, Hospital Metropolitano de Santiago (HOMS), located in Santiago, Dominican Republic. Only [\(a few hours or short trip\)](#) from Regenocyte's Heart & Vascular Institute in Naples, Florida, HOMS is one of the most advanced

healthcare facilities in the world treating Regenocyte patients for Cardiovascular, Pulmonary, Renal, and Peripheral Vascular Diseases. For more information about Regenocyte, visit www.Regenocyte.com.
